

*A Video Presentation*

# “Water Undone: The Effort to Save the Puyallup River Watershed”

**Guest Speaker: Dr. Jim Gawel**

Filmed by Dr. Gawel and videographer Paul Lovelady, this presentation provides an overview of ongoing impacts to the Puyallup River basin and the watersheds which feed into the Puyallup River.

The video includes filming taken along the Fennel Creek watershed and Victor Falls and in other sub-basins such as Swan Creek, South Prairie Creek, Dead Man’s Pond, Lower White River and more... which feed into the Puyallup River Basin.

This documentary follows on Dr. Gawel’s previous film comparing water issues on rivers in Japan, Switzerland and the U.S.

Jim Gawel, Ph.D., is an Assoc. Professor of Environmental Chemistry & Engineering and Environmental Sciences Program Coordinator for the University of WA-Tacoma.

Dr. Gawel recently returned from teaching a course on sustainable development in Kenya.
